The all-new insurance system

The **OPUS** system has been designed in consultation with insurance professionals to provide a solution that is entirely flexible, scalable and easy to use.

Created using the latest Web technology, **OPUS** can provide your insurance business with familiar Web interface functionality in the day-to-day management of your clients, their policies and your sub-agents.

Designed from the outset to be adaptable to almost any insurance environment, **OPUS** can be tailored to your business's specific requirements, including personal lines, commercial lines and even broker-to-broker agency management.

Highlights and features

Familiar Look and Feel

An instantly familiar, naturally intuitive interface that reduces training and familiarisation time and minimises human error.

A 'thin client' desktop application provides a less cluttered working experience and eliminates the need for local software updates.

Technology

OPUS is a unique Web-based insurance 'back office' system, developed in C# .NET and built on a centralised, 3 tier, thin client architecture. With the systems and SQL databases held in a secure, state of the art, fully managed and backed-up data centre, costly on-site backup and maintenance contracts are a thing of the past.

Web Integration

OPUS can be integrated with your website and using a shared database, offers you a fully integrated web solution and enabling you the option to offer an online 'quote and buy' insurance service to your clients. For those offering business-to-business facilities, **OPUS** can be configured to provide a secure extranet for your agents or affiliates.

Core functionality

Multiple rates, multiple product quote engines can be created to your requirements

Prospect/proposal management facilities, including advanced search facility

Point-in-time historical information / documentation production / issue / re-issue

Save / Referral / No Quote / Quote Available / On Cover / Temporary MTA / Permanent MTA processing, including ad-hoc premium loadings and ability to try 'what if' scenarios

Reporting (bordereaux, logs, monthly reports, etc - these can be exported into MS Excel)

Claims handling

Financial 'mini statements'

Task management

Renewals / lapses / cancellations / suspensions / reinstatements

And much more...

Reasons to choose OMNIX...

1. Experience

OMNIX has many years' experience in the insurance industry, including broking, underwriting and systems development and we understand the needs and demands of a professional insurance operation. This experience has been invaluable in the design and development of **OPUS** for our insurance clients.

2. Expertise

Our development team has the technical expertise and 'Internet know-how' to create a Web-based insurance system that uses the latest Microsoft technology to the greatest effect in **OPUS**.

3. Excellence

We offer our clients a professional and friendly approach to delivering on time, within budget and exceeding our clients' expectations. 'The **OMNIX** way' is to look beyond our clients' immediate requirements and to consider the future likely demands of their business and plan for these in the design of their **OPUS** system.

The next step?

If **OPUS** sounds like it may be of interest to you, we would be delighted to give you an online demonstration of what it can do and to explore and explain the potential benefits to your business.

For an initial, no-obligation chat about your requirements and to discuss how **OPUS** might be right for you, please contact **OMNIX** on **+44 (0)333 772 9565** or email us at info@omnix.co.uk
